

Join us to explore:

- The dynamic plantar vault
- How the dynamic foot drives functional use of the body
- Dysfunctional adaptations
- The effects of a “fallen arch”
- Effects of navicular droppage
- Value of single leg stance test
- Gait dysfunctions from the feet
- Bunions and other pathologies
- Foot mechanics (rocker system)
- The “close environment”
- Sharpening observation and assessment skills

Tuition: \$275

AMTA Member: \$250

NMT and the Dynamic Foot

Associated with NMT for Lower Extremity

Baton Rouge
December 18-19, 2010

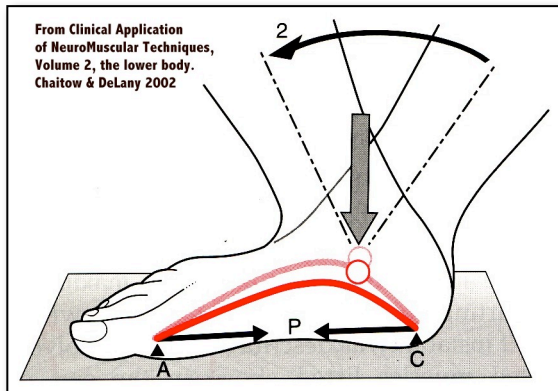

Approved for 12 LA CEU's by
LSBMT - Provider #0092

Are you missing key, critical points?

- The importance of functional dynamic feet
- How postural adaptation induced by the feet affect the rest of the body
- The impact of foot mechanics on gait
- The impact of gait on foot mechanics
- The importance of foot stability
- Critical choices that might enhance your hands-on care

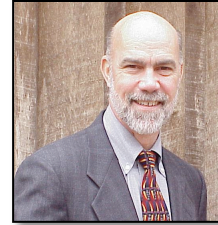

Foot mechanics are the driving force that positions the leg, knee, hip and rest of the body. Muscles and bones are designed to adapt and compensate in a functional manner while conserving body resources.

When adaptation demands are too great or are prolonged, decompensation can result, often with serious consequences. Be more effective by learning useful strategies to observe, assess and deal with problems seen in the foundation of the body - the feet. Your practice, regardless of its primary modality, can benefit from this experience and the information found in this course.

Gain from the vast knowledge of course instructor Donald Kelley

Mr. Kelley's enthusiasm as an educator of adults is readily apparent in his unique presentation style. His dedication to comprehensive education, enhanced by assisting the Human Gross Anatomy (dissection) seminars at the USF Medical College annually since 1995, is well displayed in every class that he teaches. He has been a featured speaker at FCA and FSMTA conventions and the AMTA national learning conferences. As an instructor for NMT Center seminars, Don draws on his clinical experience, advanced background in anatomy, and in-depth understanding of muscular health to give an information-packed presentation.

NMT course developer, Judith DeLany, has collaborated with Dr. Leon Chaitow; together they have produced three significant textbooks and two second editions. This has given her a unique perspective as she pioneers the emergence of NMT and manual therapy worldwide.

With the heart of a visionary, Judith's ongoing efforts have helped to form bridges between conventional and complementary medicine and provided an atmosphere for massage to be integrated into medical settings, as well as spa, sport or private practice.
